Testing 1.1: Submit form and Upload Image

HP: Form Tanggal boxnya masih agak rusak, tidak bisa

1.

The image displays two screenshots of a mobile application interface, likely for water monitoring. The left screenshot shows a form with the following fields: 'Nama mata air *' (filled with 'mata air'), 'Desa *' (filled with 'cilebim'), 'Kecamatan *' (filled with 'Jakarta'), 'Kota / Kabupaten *' (filled with 'Barat'), and 'Tanggal pemantauan *' (filled with '10 Jun 2026'). A red error message at the top states: 'Foto image.jpg gagal diupload. Laporan tetap tersimpan.' The right screenshot shows a form with three dropdown menus: 'Kondisi debit / aliran *' (filled with 'Mengalir kecil'), 'Kondisi kualitas air *' (filled with 'Air agak keruh'), and 'Kondisi kebersihan *' (filled with 'Ada sampah plastik sedikit'). Below these is a section for 'Foto mata air *' with a 'Choose Files' button and a preview of 'image.jpg'. The bottom of the right screenshot shows a mobile navigation bar with a back arrow, a home icon, the URL 'springhub.vercel.app', a refresh icon, and a menu icon.

PC: Image gagal Upload

Spring Monitoring

Log a spring's current condition — flow, water quality, cleanliness, and a geo-tagged photo.

Interactive Spring Map

Explore springs across Indonesia. View their current status, community reports, and contribute your own observations.

Source protection: public spring locations are snapped to a 5 km grid — every spring within that radius shares the same coordinate. Field leads and admins see precise locations after sign-in.

Show: ☒ Springs ☒ Tree Planting ☒ Rorak ☒ Seedling Stock ☒ Restoration

[← Back to Pengenalan Mata Air](#)

Module 1 of 4

Apa Itu Mata Air?

Apa Itu Mata Air?

Mata air adalah titik di permukaan bumi di mana air tanah mengalir secara alami keluar dari akuifer. Mata air terbentuk ketika permukaan tanah memotong muka air tanah (water table).

Jenis-jenis Mata Air

Mata air gravitasi: air mengalir karena gravitasi dari lapisan yang lebih tinggi

Mata air artesis: air muncul karena tekanan dari akuifer tertekan

Mata air celah: air keluar dari retakan batuan

Mata air depresi: air muncul di cekungan yang memotong muka air tanah

Mengapa Mata Air Penting?

Indonesia memiliki ribuan mata air yang menjadi sumber air bersih bagi jutaan masyarakat, terutama di daerah pedesaan. Mata air juga mendukung ekosistem sungai, sawah, dan keanekaragaman hayati.
